

INTRODUCTION TO THE CHEMTRAIL ISSUE

by Chemtrails911.com

Since approximately 1998, thousands of people started noticing airplanes spraying X's, parallel lines, and grid patterns across our skies. These trails initially look like contrails but actually aren't. According to the U.S. Air Force, contrails are condensation trails and happen when hot engine exhaust momentarily condenses ice crystals into pencil-thin vapor trails that quickly vanish like the wave behind a boat, very much like your breath when talking outside on a cold winter day. Chemtrails, on the other hand, linger for hours and will spread out to form large areas of "cloud" cover.

There are several theories as to why these operations may be occurring. However, most of the documentation available points to geo-engineering and space weaponry as the reasons that these spray operations are occurring. A concept that keeps popping up in major governmental studies is the idea of spraying aluminum oxide particles into the atmosphere to create a sunscreen.

This concept is exactly what respected scientist Edward

Teller, the father of the H-Bomb, called for in 1997 while at Lawrence Livermore National Laboratories. In a government sponsored report called [Global Warming and Ice Ages](#), he suggested the scattering of 1 million tons of materials into the atmosphere in order to reflect 1% of incoming sunlight. He states that it would be cheaper to slow global warming through “stratospheric deployment of oxide particulates” than to actually slow down greenhouse gasses connected with fossil-fired energy production.

The sunscreen concept is also called for in a major congressional study titled [Policy Implications of Greenhouse Warming](#), which was sponsored by the National Academy of Sciences, National Academy of Engineering, and the Institute of Medicine. This huge study was reported in 1992 and is the textbook on greenhouse gasses, global warming, policy decisions and mitigations. In this study, they talk about spraying the atmosphere with “stratospheric dust or soot” and to “simulate clouds” in order to mitigate global warming. The study also suggested dumping iron into the ocean to stimulate plankton that could potentially eat carbon dioxide. By looking at Moss Landing Marine Laboratories’ recent [dumping of iron in the ocean](#) to do just that, you can see that these are not just theories. They are theories in actual use. But the iron theory backfired when a large amount of fish died. So what are the unreported consequences of spraying the atmosphere?

Ken Caldera, also from Lawrence Livermore National Laboratories, is a concerned scientist who said that this type of spray operation could have grave environmental consequences and could cause serious health concerns. But it seems they cared nothing about Mr. Caldera's concerns.

Our children are now even being taught this aerial obscuration concept in our schools. In the level one science book, ["Essential Interactions"](#) by Centre Point Learning, Inc., a photo of a jet is titled "Particle Air" and has the caption "Jet engines running on richer fuel would add particles to the atmosphere to create a sunscreen". This is in the section titled "Solutions for Global Warming". In the same section they also show a picture of a helicopter dumping iron into the ocean as a way to mitigate global warming, as we mentioned earlier. Again, CNN actually reported the iron theory being carried out. These are not just "theories".

Not only do the governmental studies support this sunscreen theory but there are also actual [patents](#) that have been issued for devices to carry these operations out. One important patent is the [1994 Welsbach patent](#) issued to the Hughes Aircraft Co. It is for atmospheric spraying with aluminum oxide to reduce global warming by "seeding" and

reflecting 1% of incoming sunrays. It so happens that aluminum consistently turns up in chemtrail related lab test results.

Another patent worth mentioning is the [1975 US Navy patent](#) which is for a “contrail generation apparatus for producing powder contrails. In the summary section it clearly states “the term 'contrail' was adopted for convenience in identifying the visible powder trail”;. It appears they are still using the word “contrail” for convenience. The people carrying out these types of operations will never use the word “chemtrails”. They use terms such as aerial obscuration, persistent contrails, or sky soot.

But Dennis Kucinich did use the word “chemtrails” in the [Space Preservation Act](#) of 2001 in which he tried to ban chemtrails and other space-based weapons. He wrote the bill, also called H.R. 2977, while he was the head of the U.S. Arms Oversight Committee. The bill calls for a ban on space-based weapons and a ban on the types of operations that we’re seeing happen now. In section 7 of the bill, “chemtrails” is considered an exotic weapon.

Space-based weaponry is another likely reason that these operations are occurring. As is stated in the [Air Force study Owing the Weather in 2025](#)

, it is a major advantage to modify the weather and cause rain or drought for the enemy.

Their report states that the spraying of certain chemicals in the skies assists to jam radar and tele-communications systems. They go on to say that these activities could have tremendous potential in times of military aggression and are proud of the fact that these tactics could also have enormous psychological potential, which would be just as beneficial as causing drought or constant rain. The study even goes on to say that “one major advantage of using simulated weather to achieve a desired effect is that unlike other approaches, it makes what are otherwise the results of deliberate actions appear to be the consequences of natural weather phenomena”.

These operations are also advantageous to the [HAARP](#), which stands for ‘High Frequency Active Auroral Research Program’. HAARP is a highly funded research project in Alaska focusing on altering and manipulating the atmosphere for weather and military dominance. The US has a long history of spraying chemicals on innocent people in this country. The Freedom of Information Act has allowed us to access information about these experiments, including the spraying of biological agents over San Francisco in 1950 to see who got sick. This is just one example of many. Just recently in 2001, Captain Reily stood against the military’s open air germ testing. There are many more examples in the history of aerial spray operations that you can read about on the website [Chemtrails911.com](#).

In 1997 and again in 2000, [U.S. Title 50, Section 32](#) was actually revised to allow for exceptions in conducting experiments on unwitting citizens.

[Test results](#) from Chemtrials have returned positive for aluminum, barium, bacteria, virus, human blood, and molds. These chemicals are being sprayed in our skies. It's in our air we breathe at levels that are deemed unsafe.

According to the [American Lung Association](#), asthma is on the rise among all people in the United States and is the leading serious chronic illness among children. It is very likely that there is not just one single reason for the Chemtrails, but instead, there may be multiple goals to this operation. Without public pressure, it is not likely that they will ever tell us the reasons as to why they are spraying us.

Unfortunately, the goals of this activity aren't known with absolute certainty because when high level officials are asked about these spray operations, they say that

what we are seeing is "normal". When concerned pilots and Air Force personnel ask their superiors questions relating to these operations, their concerns are met with replies like "this information is on a need-to-know basis" or they are given special misinformation to make them think they are doing this for the good of the people. They are also told that speaking out

on this issue will violate national security and that they will be held accountable.

These operations cause us to have great concerns. We do not like being part of a secret spray operation without our consent. We are very worried about the health implications of spraying chemicals that are on the OSHA hazardous list. And the fine talcum powder-sized particles they call for to be sprayed are very harmful to our health according to the American Medical Association.

There is no reason to think that this will stop without public pressure. All across the country, people are noticing that something is being sprayed from planes and it is making people sick! It is time for us to pay attention and speak out! Please visit the information within this site and the many other sites that are available.

Educate yourself and tell others.
